

WWPass® wwTools

Technology Overview

WWPass provides a convenient and secure authentication solution for everyone. WWPass eliminates the need for antiquated username and password pairs. Utilizing two-factor authentication, the user obtains credentials that are encrypted, fragmented and dispersed in the cloud; no longer accessible by identity thieves.

Product at a Glance

wwTools is a software development kit (SDK) that includes all the components necessary to integrate applications with the WWPass authentication services. The SDK allows developers to build their own custom interfaces to provide unparalleled authentication for their business applications. wwTools includes the WWPass Authentication Core API, documentation, libraries, and sample code.
